AIR ELIMINATORS
STANDARD VELOCITY

THE ULTIMATE IN DISTRIBUTION EFFICIENCY
PERMANENTLY AIR-FREE SYSTEM WATER

AIR IN SYSTEM WATER CAUSES MANY PROBLEMS.
Noisy pipes, valves and other air-related system noises are often accepted as the signs of a functioning system. Excessive pump noise, cavitation and cascading water in terminal units are considered normal.

But...serious problems can occur.
Air in system water can cause corrosion, reduced efficiency, poorly heated or inadequately cooled rooms, accelerated component wear, and ongoing complaints.

Result:
Unnecessary maintenance costs and a dissatisfied owner.

There is a solution!
A system without air-related problems is possible! There is a device that will keep your system free of air, permanently. Less maintenance, quiet operation, fewer costs!

The name:
SPIROVENT AIR

THE KEY DIFFERENCE
The Spirovent’s unique construction allows not only for the removal of entrained air, but also for the countless microbubbles. Consisting of a woven copper wire configuration soldered to a copper tube, the patented Spirotube® creates a low velocity area in the Spirovent that scrubs the bubbles from the water. The air bubbles rise and collect in the air chamber before they are vented from the system via an integral automatic valve. Air problems become a thing of the past!

THE ULTIMATE IN DISTRIBUTION EFFICIENCY
ADVANTAGES TO THE INSTALLER AND THE END-USER

- Greatly reduced initial fill and start-up time
- No venting required
- Optimum heat transfer
- Increased component life
- Reduced oxygen-based corrosion and pump cavitation
- Quiet operation

THE SPIROTUBE MAKES THE DIFFERENCE

It allows the Spirovent to scrub out 100% of the free air, 100% of the entrained air, and up to 99.6% of the dissolved air in the system. Even the smallest microbubbles coalesce and rise. Air is eliminated, component life and heat transfer abilities are increased; oxygen-based corrosion and pump cavitation are reduced; and annoying gurgling, cascading, and other air-related system noises are eliminated.

1. The automatic air vent is guaranteed not to leak and can only be closed by the installer for a pressure test.
2. Lifting eyes make installation easy.
3. The air chamber has been designed so that dirt cannot reach the valve.
4. Welded steel construction guarantees long life.
5. Valve for releasing large amounts of air during filling and for skimming off floating dirt.
6. The unique Spirotube is the core of the Spirovent. Designed to trap the smallest microbubble, yet it offers little resistance to flow.
7. Threaded or flanged connections available. Threaded 3/4” - 4”; Flanged 2” and up.
8. Drain plug. Also suitable for connecting a valve or temperature sensor.

*For more detailed technical information, ask about our Spirotism booklet.

*Approximately 6 ft. per second inlet velocity

All Spirovents fabricated and stamped in accordance with ASME Section VIII, Division 1 for unfired pressure vessels.
Standard rating is 150 psi at 270°F. Consult local sales office for special requirements.
Custom dimensions available for space limitations.
Refer to High Velocity models for higher flows and web site Submittal Data for models up to 36".
